

Bername-Government can make quick and appropriate decisions by making the best use of data

willdujardin · 1 day ago

Putrajaya, November 17-By making good use of data from many sources, the government can make quick and accurate decisions, government secretary Tan Sri Mohad Zuki Ali said. Stated.

He states that this is in line with the initial impetus for the 2021-2025 Public Sector Digitalization Strategy Plan (PSPSA), which sets the use of data intelligence to manage data as a government asset. I did.

Mohd Zuki said the My DIGITAL Initiative and Malaysia's 4IR Policy in terms of developing data-driven digital service policies as a result of data analytics and artificial intelligence improving the effectiveness of serving the general public. He also said he supported.

"In line with current development, we must all acknowledge that data is the most valuable asset we can use to create many innovations and products that may be useful in all quarters. not.

The phrase "data is the new soil" is often heard when talking about innovation. In short, with the launch of the digital economy, data has become a key element of innovation and a key agent in ensuring the sustainable growth of the digital economy.," He said.

Mohd Zuki said this in his speech at the ceremony to announce the winners of the Technology Advancement (CHIPTA) 2021 Challenge to Innovation and Problem Solving Challenges today.

He said the acquisition of digital technology is important for the country to overcome productivity limits in order to upgrade the Malaysian economy at the same time.

“The role of digital technology is especially evident since last year when the COVID-19 pandemic poses a tough challenge for all countries to continue their normal lives.

“The ability to seize the opportunities that come from innovative technologies and business models will play an important role in spurring the country’s new economic growth drivers,” he said.

Regarding CHIPTA, Mohd Zuki said the implementation of the program was on the agenda of the government. In short, leverage data intelligence to create innovations and products that people can use.

Mohd Zuki continues their lives with all products developed through the CHIPTA 2021 program providing significant impact and high value that are beneficial to different quarters, especially those affected by the COVID-19 pandemic. I wanted to be able to do it.

He also hoped that the Treasury would work together on the allocation and that CHIPTA products would be emphasized and commercialized.

“We are confident that this initiative will create digital start-ups, which will in turn contribute to increased employment opportunities and improve the national economy and people’s quality of life,” he said.

The new norms and the catalysis of innovation for a better future, with the theme of CHIPTA 2021, which took place from August 2nd to September 1st, attracted 123 teams.

The contest was divided into four categories: public sector, higher education (IPT) students, junior high school, and public / industry members, with a total prize pool of RM66,000.

Pharmacoders of the National Pharmaceutical Regulatory Agency and Varsity Quadro of Universiti Kebangsaan Malaysia have been announced as winners in the public and IPT student categories, respectively.

The members of the public / industrial category were won by the Appkan team, and AIA United of Sepang Vocational College was awarded the student category of secondary school.
